

Rick Lime - a nonsense poetry writing assistant

Dialogue System course project, A.Y. 2019-2020

by

Arianna Masciolini

Introducing Rick Lime

✚ helps writing **limericks**

Introducing Rick Lime

- ✦ helps writing **limericks**
 - ✦ very short and constrained form of nonsense poetry
 - AABBA

Introducing Rick Lime

- ❖ helps writing **limericks**
 - ❖ very short and constrained form of nonsense poetry
 - AABBA
 - ❖ not a competitive game but creative/entertaining activity

Introducing Rick Lime

- ❖ helps writing **limericks**
 - ❖ very short and constrained form of nonsense poetry
 - AABBA
 - ❖ not a competitive game but creative/entertaining activity
- ❖ automatically generates the opening and closing verses based on user input

 - AABBA
 - ❖ not a competitive game but creative/entertaining activity
- ❖ automatically generates the opening and closing verses based on user input
- ❖ helps with rhymes

Introducing Rick Lime

- ❖ helps writing **limericks**
 - ❖ very short and constrained form of nonsense poetry
 - AABBA
 - ❖ not a competitive game but creative/entertaining activity
- ❖ automatically generates the opening and closing verses based on user input
- ❖ helps with rhymes
- ❖ *speaks* in rhymes!

Technicalities

- ✦ ~~prototype only runs in the RASA shell~~ (actually works as a Telegram bot too)

Technicalities

- ❖ ~~prototype only runs in the~~ **RASA shell** (actually works as a Telegram bot too)
 - ❖ ~~meant to be a~~ **Telegram bot**, but the documentation is extremely unclear

Technicalities

- ❖ ~~prototype only runs in the~~ **RASA shell** (actually works as a Telegram bot too)
 - ❖ ~~meant to be a~~ **Telegram bot**, but the documentation is extremely unclear
 - RASA installation disrupted several times in attempts

Technicalities

- ❖ ~~prototype only runs in the~~ **RASA shell** (actually works as a Telegram bot too)
 - ❖ ~~meant to be a~~ **Telegram bot**, but the documentation is extremely unclear
 - RASA installation disrupted several times in attempts
 - ❖ also tried **Aimybox**, but realized it would be problematic for the presentation

Technicalities

- ❖ ~~prototype only runs in the~~ **RASA shell** (actually works as a Telegram bot too)
 - ❖ ~~meant to be a~~ **Telegram bot**, but the documentation is extremely unclear
 - RASA installation disrupted several times in attempts
 - ❖ also tried **Aimybox**, but realized it would be problematic for the presentation
- ❖ rhymes suggestions fetched from an online database

Technicalities

 - ❖ ~~meant to be a~~ **Telegram bot**, but the documentation is extremely unclear
 - RASA installation disrupted several times in attempts
 - ❖ also tried **Aimybox**, but realized it would be problematic for the presentation
- ❖ rhymes suggestions fetched from an online database
 - ❖ queries via **datamuse**, a word-finding query engine

Relation to course contents

- ✦ theoretical concepts (partially supported):
 - ✦ over-answering
 - ✦ other-answering

Relation to course contents

- ❖ theoretical concepts (partially supported):
 - ❖ over-answering
 - ❖ other-answering
- ❖ custom actions
 - ❖ `action_add_verse`
 - ❖ `action_set_verses`
 - ❖ `action_suggest_rhymes`

Relation to course contents

- ❖ theoretical concepts (partially supported):
 - ❖ over-answering
 - ❖ other-answering
- ❖ custom actions
 - ❖ `action_add_verse`
 - ❖ `action_set_verses`
 - ❖ `action_suggest_rhymes`
- ❖ forms
 - ❖ `www_form`

Implementation challenges

- ✚ rhymes are not orthographically defined in English

Implementation challenges

- ❖ rhymes are not orthographically defined in English
 - ❖ solution: “trust” the online database

Implementation challenges

- ❖ rhymes are not orthographically defined in English
 - ❖ solution: “trust” the online database
- ❖ hard-to-generalize slot values (entire verses and adjectives in particular, places seem to be more easily recognizable)

Implementation challenges

- ❖ rhymes are not orthographically defined in English
 - ❖ solution: “trust” the online database
- ❖ hard-to-generalize slot values (entire verses and adjectives in particular, places seem to be more easily recognizable)
 - ❖ adjectives: only solution seems to consist in adding more data in `nlu.md`
 - spacy and other pretrained embeddings do not help

Implementation challenges

- ❖ rhymes are not orthographically defined in English
 - ❖ solution: “trust” the online database
- ❖ hard-to-generalize slot values (entire verses and adjectives in particular, places seem to be more easily recognizable)
 - ❖ adjectives: only solution seems to consist in adding more data in `nlu.md`
 - spacy and other pretrained embeddings do not help
 - ❖ trick for verses: save entire user utterances, then set slots manually

Future work

- ✦ make the assistant more stable (more training data, more robust actions)

Future work

- ❖ make the assistant more stable (more training data, more robust actions)
- ❖ better error handling

Future work

- ❖ make the assistant more stable (more training data, more robust actions)
- ❖ better error handling
- ❖ add possibility to use two different adjectives for the first and last verse, like in some variants of limerick

Future work

- ❖ make the assistant more stable (more training data, more robust actions)
- ❖ better error handling
- ❖ add possibility to use two different adjectives for the first and last verse, like in some variants of limerick
- ❖ choose article (a/an) according to word

Future work

- ❖ make the assistant more stable (more training data, more robust actions)
- ❖ better error handling
- ❖ add possibility to use two different adjectives for the first and last verse, like in some variants of limerick
- ❖ choose article (a/an) according to word
- ❖ make it possible to modify verses after the poem is complete
